

## Welcome to the Website of the Buy Smart Project

The project Buy Smart, funded by the European program "Intelligent Energy Europe", provides free consultation and information material on green procurement.

The central strategic objective of the project is to increase the share of energy efficient procurement in Europe. This will lead to a higher market impact and therefore support the production and the use of energy efficient goods and services.

The project is addressed to both private companies and public authorities. Aside from answering general questions we offer procurement tools for the product groups building components, green electricity, household appliances, lighting, office equipment and vehicles.

Please visit our national sub sites for specific information:
